

Donor thank you newsletter

YOUR HOSPITAL. YOUR IMPACT.

Dr. Hai Nguyen, with the next-generation orthopaedic surgical robot. A breakthrough made possible thanks to you.

+ PRECISION IN CARE

Thanks to your generosity, the new knee surgery robot is transforming the way procedures are done. Each knee replacement is now + precise, + personalized... helping patients like Marielle get back on their feet faster.

For over two years, Marielle waited for surgery on her left knee. As the pain grew worse, her mobility diminished. And yet, she remained hopeful. She knew that day would come. And finally, it did.

On the day of her surgery, Marielle remained awake. Under local anesthesia, completely at ease, she listened to the calm exchanges between the team members. Around her: a surgeon, an anesthetist, nurses... and one unusual teammate: an orthopaedic surgical robot, made possible thanks to your generosity!

Thanks to this technology, Marielle received a knee prosthesis precisely tailored to her morphology. Less physiotherapy, less medication—and above all, a faster return home.

“ The knee robot revolutionizes the way we perform knee surgery. It customizes every procedure based on each patient’s unique morphology, with unparalleled precision.

— Dr. Hai Nguyen, Orthopaedic Surgeon

Thanks to the compassionate commitment of people like you, medicine is moving forward. You enable Hôpital Charles-Le Moyne to deliver + ultraspecialized care, + tangible innovation, and + lasting results for every patient.

DID YOU KNOW?

Hôpital Charles-Le Moyne is the very **first Francophone public hospital in Québec** to be equipped with such an advanced orthopaedic surgical robot. State-of-the-art technology that enables + precise, + personalized, and less invasive surgeries.

Want to see more? Take a behind-the-scenes look at this exceptional procedure by scanning the QR code!

A quiet moment, just before the procedure. In the room, Marielle and Sébastien share an exchange filled with humanity. A look. A hand gently placed. And the quiet strength of a team experts.

Care, at its most humane. In Réjeanne's arms, a therapy doll. In her eyes, a quiet moment of peacefulness. Thanks to you, even the smallest gestures bring healing.

Here, light soothes, sounds comfort, and memories come back to life. A meaningful moment made possible thanks to you.

+ SERENITY FOR OUR GERIATRIC PATIENTS

Thanks to you, our elderly patients can enjoy a little escape from their daily lives—a sensory journey filled with tranquility, compassion and beauty. And they have you to thank!

Elderly patients like Réjeanne who arrive at the Hospital's short-term geriatric unit on 7 South often feel uprooted. They suffer from anxiety, agitation or dementia, making their stay hard on them and on their families.

These patients need an **adapted therapeutic environment** to improve their daily lives during their hospital stay. That's why we created a **multisensory relaxation room**—paid for by YOUR donations!

An environment like this helps families start conversations more easily with their loved ones and makes their visits + enjoyable. It also helps care staff create relationships with patients who are often agitated and stressed. **But above all, it helps our patients**, by making their hospital stay + pleasant and less stressful.

A WONDERFULLY HUMAN-CENTRED PROJECT, MADE POSSIBLE BY YOUR COMMITMENT TO STAND WITH US.

This brand new multisensory room in the geriatric unit was funded thanks to you and, above all, the generous participants in the Liberty Lotto.

WHAT IS A SNOEZELEN MULTISENSORY ROOM?

Patients hospitalized in the geriatric unit at Hôpital Charles-Le Moyne now have access to a space that promotes well-being. The space consist of:

- A **relaxation corner** with armchairs and a projector that shows comforting images.
- A **library corner** with all kinds of therapeutic objects to manipulate, including therapy dolls, puzzles and various sensory objects.
- A **family space** equipped with a television so that patients can stay connected to their environment, and an interactive console that projects games and images to stimulate the senses and encourage patients to move.
- A **kitchen corner** where families can bring homemade meals to their loved one in the Hospital.

DID YOU KNOW?

The project to create a multisensory room was achieved in collaboration with the Institut de gériatrie de Montréal. Hôpital Charles-Le Moyne is the first Hospital centre in Québec to offer a multisensory room. Most of these multisensory environments are found in living environments for seniors, like residential and long-term care centres.

Practice. Innovation. In a real-life setting. This mother-and-baby simulator lets care teams rehearse the unpredictable—bringing + safety, + training, and + confidence to every patient's bedside.

+ EXCEPTIONAL CARE

Thanks to simulation training, our health professionals develop their reflexes, critical judgment and ability to work as a team. Every hour spent here ensures the delivery of care that is + secure, + compassionate and + efficient for the whole Hospital. And this know-how is not just for the next generation. The Hospital's current teams also come here to train, upgrade and adapt to the new realities of the health system.

“ Through **simulation**, our teams develop crucial reflexes in critical situations, in a secure setting.

— Marie-Eve Dion-Fortin
Chief of Medical Teaching and Clinical Simulation

An emergency. A pregnant woman in distress. Everyone mobilizes: the equipment is readied, vital signs are monitored, decisions are made quickly. Every action is calm, precise and perfectly coordinated.

But this scene is not happening in the intensive care unit. It's in the clinical simulation centre, at Hôpital Charles-Le Moyne.

“ It's a place where **innovation** and **continuous improvement** come together to perfect the training of health and social services professionals.

— Alexandra Plourde, Assistant Director,
Education and University Affairs Directorate

Here, care teams are learning to deal with critical, complex and sometimes extremely rare situations. The female patient is a high-fidelity mannequin, capable of simulating realistic obstetrical emergencies, including a delivery. The mannequin is surrounded by future doctors, nurses, respiratory therapists—all engaged in active learning, in a 100% safe environment.

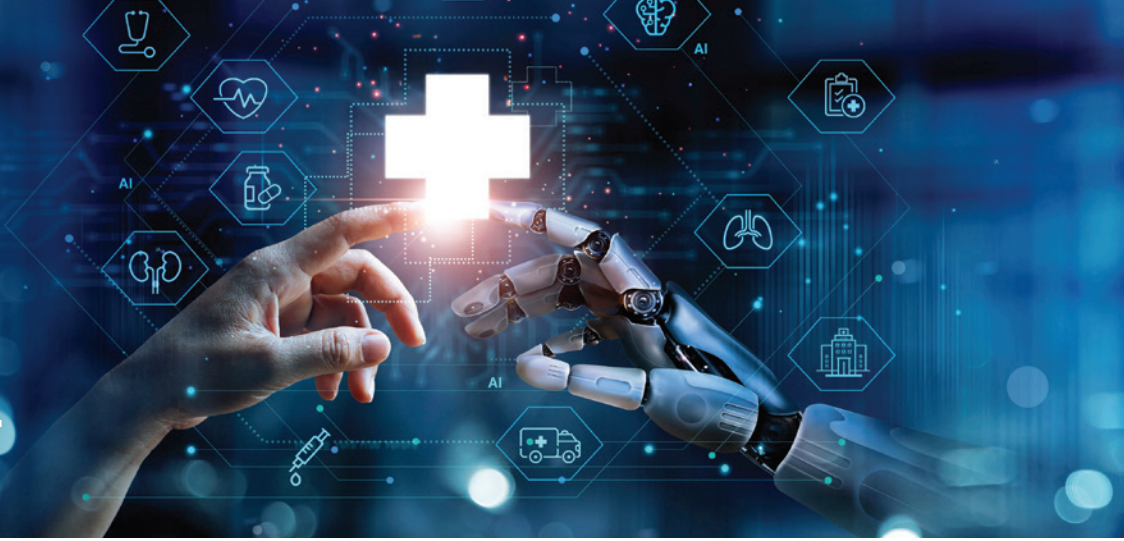

Every simulated scenario, every trained professional, every patient receiving the best care possible... And it's all thanks to caring people like you.

The future of continuous training starts here, thanks to you! You're supporting a university Hospital that's investing in learning, innovation and a human approach. You're helping to save lives by fine-tuning every intervention.

THE HEALTH CARE REVOLUTION IS UNDERWAY. AND THANKS TO YOU, IT STARTED HERE, AT HÔPITAL CHARLES-LE MOYNE.

Your generosity is propelling us towards a future where technology, compassion and medical excellence are one in the same.

For two years now, our **high-fidelity simulation room**, one of the most modern in Québec, serves to train medical students and upgrade the skills of our care staff.

This year, you helped our Hospital become the **first in Québec to offer a multisensory room**, a space where technology is used to soothe our elderly patients.

You also helped turn our Hospital into the **first Francophone public hospital to purchase an orthopaedic robot for knee surgery**. A robot entirely funded by you, our donors. A first in paving the way to medicine that is + precise, less invasive and + compassionate!

And that's just the beginning! Soon, our surgery teams could be treating cancers with millimetric precision, thanks to the Da Vinci surgical robot. The Foundation has committed to funding this major project—made possible by the generosity of donors like you.

In a context where **20% of Québec's population is served by our Hospital**, where the needs are skyrocketing, innovation is no longer a luxury. It's essential!

Your support has made us a leader in ultraspecialized care, but also in teaching and research—the very heart of our Hospital's academic mission. We're attracting the best talent. And above all, offering world-class care to patients. Right here, in the Montérégie.

Thank you for believing in **our vision**—one we've been pursuing **for over 60 years!** Thank you for being a part of this transformation. With your support, the future of health care looks bold and bright, right here, at your Hospital.
